

THOUGHTS / IDEAS SO FAR - :

- * reinstate raised brick garden beds along northern side of OBH
- * create new beds & circular bed with a concentration of "old-fashioned" perennials + plants such as -!
 - roses
 - bearded iris
 - daisies
 - penstemon
 - lavender etc.....
 - geraniums
- * plant 2 or 3 row shelterbelt of ^{native} shrubs (trees not possible due to overhead powerlines) along southern boundary, extending around S.E. corner. Purpose of this two-fold:
 - 1) decrease cold wind exposure
 - 2) reduce maintenance of grassed areas.
- * reinstate bus parking area
- * create 90° 'nose-in' parking for approx. 24 vehicles along picket fence; extra parking at western end.
- * picket fence historically quite significant, as is circular bed in front of central entry steps.
- * remove - pine next to cottage & pines along entry drive
 - all suckering elms (?), privet and African boxthorn
 - other environmental weeds.
- * re-use existing decorative concrete pillars + fence panels around southern side of buildings (placement needs further discussion)
- * PLEASE discuss + give me feedback...
this is just a rough beginning!
